

# Plus[6]® Plus[8]®

Design: Johan Larsson, Torbjörn Höjer

# Plus[6]®

**Design:** Johan Larsson, Torbjörn Höjer

Plus[6]® combines first-class ergonomics, multiple position settings, and light, attractive design. It features our 'Free Float' function (see below).

The chair has dynamic armrests, which means that the armrest plates supports can slide forwards, backwards, and diagonally – in other words, you can have them just where you want them. The upper side of the armrests moulds itself to the shape of your forearm because it is made of a deformable material

known as Technogel®. Of course, the armrests are also vertically and laterally adjustable.

Plus[6]® is also adjustable for seat depth, seat height, and backrest height. There are two different backrest heights, and you can also choose a neck support which is adjustable for height, depth and angle.

Plus[6]® and Plus[8]® are designed together with the visitor and conference chair Plus[cv].

### Free Float

Plus[6]® features the 'Free Float' function which means that the seat and backrest follows your body movements completely independently. The resistance can be adjusted in accordance with your body weight, and the function can be locked steplessly in any seat and back condition.

### Optional SafeBack™

SafeBack™ means that when the backrest is locked in the backward-leaning position, the function guarantees safe transition to the normal position. To unlock the backrest, you simply lean against it.

**mechanism:** Free Float: seat and back move completely independently, stepless locking function, adjustable resistance, SafeBack™

**back:** adjustable backrest height, adjustable rake **seat:** adjustable seat tilt, seat height (gas spring), seat depth

**dynamic armrests:** adjustable for width, height and angle, armrest height: 235-300 mm **neck support:** steplessly adjustable for height, depth and angle **metal:** powder-coated steel, cast aluminium **plastics:** Technogel®, polyamide, polyurethane, polypropylene

**padding:** CMHR-foam **optional:** personalised upholstery Motif and Contour, silver enamelled or polished aluminium star base, extended gas spring, footrest, back stud with own name/logo **other:** armchair in same family: Plus[cv] **units:** mm, kg

# Plus[8]®

**Design:** Johan Larsvall, Torbjörn Höjer

Plus[8]® shares design and settings with Plus[6]®, but has another function – Synkron, which you can read more about below.

This chair also has dynamic armrests, which means that the armrest supports can slide forwards, backwards, and diagonally – in other words, you can have them just where you want them. The upper side of the armrests moulds itself to the shape of your

forearm because it is made of a deformable material known as Technogel®. Of course, the armrests are also vertically and laterally adjustable.

Plus[8]® is also adjustable for seat depth, seat height, and backrest height. There are two different backrest heights, and you can also choose a neck support which is adjustable for height, depth and angle.

## Synkron

Plus[8]® features synchronised tilt, which means that seat and backrest follow one another in a close proportion. When you lean backwards, the backrest moves slightly more than the seat, allowing the necessary movement of the hip joint. Resistance can be adjusted in accordance with your body weight, and the function can be locked steplessly in any seat and back condition.

## Optional SafeBack™

SafeBack™ means that when the backrest is locked in the backward-leaning position, the function guarantees safe transition to the normal position. To unlock the backrest, you simply lean against it.

**mechanism:** synchronised tilt: on leaning backwards, the backrest moves more than the seat in a ratio of 1:1.5, stepless locking tilt, adjustable tilt resistance, SafeBack™ **back:** adjustable backrest height, adjustable rake **seat:** adjustable seat tilt, forward position, seat height (gas spring), seat depth **dynamic armrests:** adjustable in width, height and angle, armrest height: 235-300 mm **neck support:** steplessly adjustable for height, depth and angle **metal:** powder-coated steel, cast aluminium **plastics:** Technogel®, polyamide, polyurethane, polypropylene **padding:** CMHR-foam **optional:** special Motif and Contour upholstery, silver enamelled or polished aluminium star base, extended gas spring, footrest, back stud with own name/logo **general:** armchair in same family: Plus[cv] **units:** mm, kg

### Personalised upholstery

Plus[6]® and Plus[8]® can be customised by selecting one of two different upholstery variants: Motif or Contour.

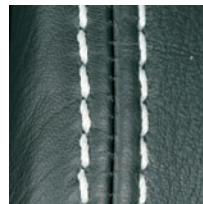

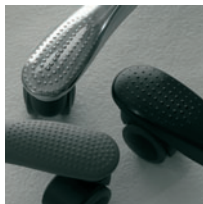

#### Motif

Motif means that the chair has two feature seams running along the whole of the back and seat. As an option, you can choose to have a contrasting fabric between them. The excellent basic comfort of the chair is complemented with extra padding and two transverse folds in the seat which provide a softer support.

#### Contour

Contour is the same as Motif but has additional stitching in black, white or silver-grey thread around the whole of the seat and back. Contour can be obtained with the chair covered in leather or in Comfort quality fabric. The centre part is also available in optional fabric.
